Check the appropriate box to indicate the rule pursuant to which this form is being filed, and provide the period to which the information in this form applies:

Rule 13p-1 under the Securities Exchange Act (17 CFR 240.13p-1) for the reporting period from January 1 to December 31, 2015.

Section 1 - Conflict Minerals Disclosure**Item 1.01 Conflict Minerals Disclosure and Report****Conflict Minerals Disclosure**

In accordance with Rule 13p-1 under the Securities Exchange Act of 1934 (“Rule 13p-1”), CommScope Holding Company, Inc. has filed this Specialized Disclosure Report (“Form SD”) and Conflict Minerals Report for the year ended December 31, 2015. Both reports are publicly available at http://www.commscope.com/Docs/Corporate-Responsibility/Philosophy/2015_SEC_Filings.pdf

Item 1.02 Exhibit

A copy of our Conflict Minerals Report for the year ended December 31, 2015 is filed as Exhibit 1.01 hereto.

Section 2 - Exhibits**Item 2.01 Exhibits**

Exhibit 1.01 - Conflict Minerals Report as required by Items 1.01 and 1.02 of this Form.

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has caused this report to be signed on its behalf by the undersigned, hereunto duly authorized.

COMMSCOPE HOLDING COMPANY, INC.

| 1.01 | Conflict Minerals Report for the Year Ended December 31, 2015. |

**Conflict Minerals Report of CommScope Holding Company, Inc.
For the Year Ended December 31, 2015
Pursuant to Rule 13P-1 Under The Securities Exchange Act of 1934**

CommScope Holding Company presents this Conflict Minerals Report for the year ended December 31, 2015 pursuant to Rule 13p-1 under the Securities Exchange Act of 1934 and associated guidance issued by the Securities and Exchange Commission. Unless otherwise specified or unless the context otherwise requires, references to “CommScope,” “we,” “us” or “our” refer to CommScope Holding Company, Inc. and its consolidated subsidiaries.

Overview of our Conflict Minerals Program

CommScope Holding Company, Inc. is a leading global provider of infrastructure solutions for communication networks. In 2014, our leaders defined a sustainability philosophy on corporate responsibility that embraces our core company values. As part of our values to respect people and our planet, we expect our suppliers to conduct their worldwide operations in a socially and environmentally responsible manner and source raw materials only from reputable organizations pursuant to our Conflict Minerals Policy and following the Organisation for Economic Cooperation and Development (“OECD”) due diligence framework. The Policy is available on our website at <http://www.commscope.com/About-Us/Corporate-Responsibility-and-Sustainability/Philosophy/Document-Library/>.

On August 28, 2015, CommScope completed the acquisition of TE Connectivity’s Broadband Network Solutions (“BNS”) business, a leader in fiber optic connectivity for wireline and wireless networks. The operations of the BNS business are included in this Conflict Minerals Report from the date of the acquisition.

CommScope Products

Conflict minerals in the form of tin, tantalum, tungsten and gold (collectively, “3TG”) were necessary to the functionality or production of the following categories of products we manufactured or contracted to have manufactured during 2015.

- Broadband Products – Radio frequency (RF) and optical network products
- Enterprise Products – Data center and intelligent building products
- Wireless Products – Distributed coverage and capacity, outdoor macro cell site, small cell and backhaul products
- BNS Products – Fiber optic connectivity products for wireline and wireless networks

Reasonable Country of Origin Inquiry

We conducted a reasonable country of origin inquiry (“RCOI”) to determine whether any of the necessary conflict minerals in our 2015 products originated in the Democratic Republic of the Congo and the adjoining countries (the “Covered Countries”), or were conflict minerals from recycled or scrap sources. The term “conflict minerals” comes from section 1502 of the Dodd-Frank Wall Street Reform and Consumer Protection Act and the Conflict Minerals Rule, 17 CFR Parts 240 and 249b and is defined as columbite-tantalite, also known as coltan (from which tantalum is derived); cassiterite (tin); gold; wolframite (tungsten); or their derivatives; or any other mineral or its derivatives determined by the U.S. Secretary of State to be financing conflict in the Democratic Republic of the Congo or an adjoining country. To make the RCOI determination, we engaged our suppliers to identify the smelters and refiners (“facilities”) of necessary conflict minerals that may have been contained in our products (“Potential 3TG Facilities”). We determined which of the Potential 3TG Facilities are recognized by the Conflict Free Sourcing Initiative (“CFSI”) to be processors of conflict minerals (“Potential 3TG Facilities”), and reviewed available information on the sourcing of conflict minerals by Potential 3TG Facilities.

Our RCOI included:

- Identification of direct suppliers from our Enterprise Resource Planning software to be considered for inclusion in a Conflict Mineral survey. These suppliers provided materials, parts, components and salable products to us in 2015.
- Risk assessments by our conflict minerals team, based on the knowledge of supplier parts, as to the probability of the supplier’s parts containing 3TGs. Supplier risk was rated as a High Risk, Medium Risk or Low Risk.
- Surveys of approximately 1,400 direct suppliers by our conflict minerals team using the CFSI Conflict Minerals Reporting Template (the “Template”), from which we identified approximately 700 direct suppliers of materials, parts, components or products containing necessary conflict minerals (“3TG Direct Suppliers”);
- A requirement, as part of the survey and our accompanying communications, that suppliers provide a conflict free statement or use the Template to provide to CommScope information from their supply chains regarding Potential 3TG Facilities and the origin of necessary conflict minerals processed at these facilities;
- If needed, follow-up with 3TG Direct Suppliers to clarify, update or complete information reported to us through the Template or their conflict free statement. Response red flags requiring follow-up included completeness (including smelter data), consistency, listing of unknown smelters, listing of non-certified smelters, listing of embargo countries and suppliers indicating 3TGs were not used in their products when assessed High Risk as containing 3TGs.

We have set clear expectations of suppliers that we expect suppliers to be conflict free from the Covered Countries. However, continuing to source from certified smelters or refiners in that area is acceptable. Suppliers indicating sourcing from the Covered Countries require follow up if the supplier did not state they are sourcing from certified CFSI smelters or refiners.

RCOI Supplier Survey Response

For reporting year 2015, approximately 85% of the suppliers that were surveyed responded. The non-responding suppliers were addressed as discussed in the Conflict Minerals Due Diligence Measures section below.

RCOI Conflict Minerals Status

We have determined with respect to our products containing necessary conflict minerals that we know or have reason to believe that some of the necessary conflict minerals originated or may have originated in the Covered Countries. Further, we know or have reason to believe that these necessary conflict minerals may not be conflict minerals from recycled or scrap sources.

Conflict Minerals Due Diligence Measures

Our conflict minerals due diligence process is based on the OECD's Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas, including the Supplement on Tin, Tantalum and Tungsten and the Supplement on Gold (Second Edition 2013) (the "OECD Guidance"), a recognized due diligence framework.

The design of our due diligence measures is specific to our downstream position in the minerals supply chain and the OECD recommendations for downstream actors that have no direct relationships to smelters or refiners, and the use of independent facility assessment programs to provide information about smelters or refiners.

The design of our due diligence process includes the following steps:

(1) Establishment of strong internal company management systems, including the following:

- Conflict Minerals Policy
- Cross-functional Conflict Minerals Corporate Management Team that includes the Global Supply Chain, Compliance, Legal and Corporate Responsibility, with executive management support
- Conflict minerals process document as part of our ISO 9001:2008 Quality Management System "Due Diligence Process for Reporting of Conflict Minerals"
- Supplier agreement language that includes conflict free sourcing and explanation of supplier requirements
- Utilizing the SAP Product Stewardship Network for data storage, analysis and reporting
- Employees and external parties have access to an ethics reporting system, The CommAlert Line (866-277-2410), or may report via the website <https://commalert.alertline.com> or email CommScope's Corporate Ethics Officer at ethics@commscope.com

(2) Identification and assessment of risks in the supply chain — Based on the knowledge of supplier parts, each supplier was assessed by our conflict minerals team for likelihood of the supplier's parts containing 3TGs and classified as High Risk, Medium Risk or Low Risk. In addition, supplier responses are risk assessed as High Risk, Medium Risk or Low Risk based on the accuracy, and completeness of their response and program. The conflict minerals team compared the Potential 3TG facilities to the facilities that are listed by CFSI as either compliant, in process with the Conflict Free Smelter Program ("CFSP"), or unknown.

(3) Design and implementation of a strategy to respond to identified risks — As a downstream supplier, we do not assess the due diligence practices of Potential 3TG Facilities. Once a supplier is identified as high risk, a risk management plan is implemented including engagement with the relevant 3TG Direct Suppliers. We encourage 3TG Direct Suppliers to urge the Potential 3TG Facilities in their supply chain to join the Conflict Free Smelter Program. Each unresponsive and High Risk supplier is indicated in a report provided to the Conflict Minerals Corporate Management Team for supplier review to determine if alternative sourcing will be pursued. High Risk suppliers are identified by the following:

- No response after two or more attempts
- Smelter data is not provided but use 3TGs
- Poor smelter data (incorrect or smelter not found)
- Indicate they are not in scope of the law
- Provide conflict free letters with no data behind their response
- Distributors that provide no smelter data and will not provide the Original Equipment Manufacturer (OEM) contact on the products supplied
- Suppliers sourcing 3TGs from the Covered Countries but no further explanation of the smelters or refiners in use

(4) Support of industry organizations to carry out independent third-party audits of facilities' due diligence practices — We support the industry initiative that conducts audits of facilities' due diligence activities and we encourage our suppliers that use smelters or refiners to participate in the CFSP. As a downstream supplier, we do not have a direct relationship with conflict minerals smelters and do not perform or direct audits of these entities within our supply chain. In connection with our due diligence, we utilized information made available by the CFSI concerning independent third-party audits of smelters.

(5) Annual reporting through this Conflict Minerals Report.

Results

This is our first reporting year and we are progressing toward our objective of responsible minerals sourcing. Of the Potential 3TG Facilities identified, there are 3TG Facilities reported by suppliers that have not yet participated in the Conflict Free Smelter Program. As discussed above in the RCOI Conflict Minerals Status section, we have determined with respect to our products containing necessary conflict minerals that we know or have reason to believe that some of the necessary conflict minerals originated or may have originated in the Covered Countries. Further, we know or have reason to believe that these necessary conflict minerals may not be conflict minerals from recycled or scrap sources.

Statement on Supplier Status

Supplier knowledge of the Conflict Minerals law and, in turn, their responses have improved from our first inquiry in 2014. Further understanding of the law and our requirements will help improve data received from the RCOI process. However, many suppliers have not yet performed a full inquiry with their suppliers at this time.

Future Goals to Mitigate Risk

We are committed to continuously improving our RCOI and due diligence process and intend to take the following steps in 2016:

- (1) Further educate our suppliers on our conflict minerals requirements for them.
- (2) Clearly communicate our conflict free sourcing expectations, as defined in our policy.
- (3) Leverage our supplier relationships to encourage better traceability measures by our in-scope suppliers.
- (4) Continue to refine our due diligence process in accordance with the OECD Guidance.
- (5) Review and follow-up with suppliers on reported unknown or incorrect smelters.

Tables 1 – 4: Facility Lists by Mineral, Country and Status

The Tables are a result of the review of the data from several sources, including information reported to us by our 3TG direct suppliers on the Template, from the SAP Product Stewardship Network and from the CFSI website (<http://www.conflictreesourcing.org/>). In many cases, facility information was provided to us for the entire supply chain of our 3TG Direct Suppliers, and did not identify those facilities believed to contribute necessary conflict minerals to any particular CommScope product. There are 90 tin Facilities, 46 tantalum Facilities, 50 tungsten Facilities, and 126 gold Facilities listed. This compliance status is based solely on information made publicly available by the CFSI, without independent verification by us. Unverified and/or unknown facilities are not listed as we have engaged our suppliers to verify smelter validity.

Facility Name is listed as they appear on the CFSI Smelter or Refiner Information Exchange or the name as given by the supplier. A company appears more than once if it was reported to us for more than one facility (i.e., smelter, refiner, recycler or scrap processor) that is processing different types of minerals or metals.

Facility Identification is the CSFI Smelter or Refiner identification number as shown on the CFSI website, from the Template, or the supplier identification for the smelter or refiner.

Facility Country refers to the processing facility's location and does not indicate necessarily where the facility sources from.

Status refers to the compliance status of the smelter or refiner.

CFSP Compliant refers to facilities that are listed by CFSI (as of May 5, 2016) as (a) compliant with Conflict Free Smelter Program protocols or (b) certified or accredited by a similar independent facility assessment program such as the Responsible Jewellery Council's (RJC) Chain-of-Custody Certification Program, or the London Bullion Market Association's (LBMA) Responsible Gold Programme.

CFSP Active refers to facilities that have committed to undergo a CFSP audit or is participating in one of the cross-recognized certification programs.

CFSP Participating and **CFSP Progressing** refer to facilities that have committed to complete a CFSP validation audit within two (2) years.

Not yet participating refers to known facilities with sourcing practices that could not yet be determined.
